EDUCATION

Bachelor of Science, Computer Science, University of Massachusetts Boston 01/2024 — 05/2027

- **Relevant Courses:** Data Structures & Algorithms, Programming in C, Calculus II, Linear Algebra, Discrete Math, Fundamentals of Physics II

Certificates: Python 3 - Java - C - MongoDB - Intro to GenAI - HTML

WORK EXPERIENCE

Research Assistant – Brain Stimulation & Simulation Lab *(Clare Boothe Luce Fellow)* 02/2025 – Present
University of Massachusetts Boston

- Developing an end-to-end FEM head-modeling pipeline correcting for MRI partial-volume loss in cortical surface reconstruction, using spherical harmonic (SPHARM) decomposition to parametrically scale gyral width and produce anatomically accurate tetrahedral meshes for transcranial current stimulation simulation.
- Building the surface-repair and volume-meshing stages of the pipeline – reconstructing self-intersecting SPHARM surfaces per scaling factor and stacking corrected GM/WM surfaces with other head tissues into a TetGen-ready FEM mesh for field simulation in SCIRun.
- Fixing up fixmesh, a Python mesh-repair library aiming to resolve self-intersections in reconstructed surfaces via cutting, detaching, and local remeshing strategies.

Software Developer – Lumen Technologies 08/2026 – Present
Remote

- Contributing to MITCH, a telecommunications service-automation platform that modernizes legacy ARM inventory APIs by routing requests to modern services and transforming responses into backward-compatible contracts.

Software Developer Intern – Lumen Technologies 05/2026 – 08/2026
Remote

- Built a Terraform-based Datadog monitoring framework across 18+ services with reusable modules and a Python CLI, cutting monitor setup time from 30–120 minutes to ∼2 minutes per service (80–95% reduction).
- Designed multi-cloud secret-rotation automation for AWS, Azure, Google Cloud, and Oracle, standardizing security workflows and helping mitigate a credential-related risk that had contributed to 17 hours of NaaS downtime over the prior year.

Course Assistant – CS 210: Intermediate Computing with Data Structures 02/2026 – Present
University of Massachusetts Boston

- Run plagiarism checks on student programming submissions and hold office hours to help students with course concepts and assignments outside the classroom.

PROJECTS

Co-Developer, WiseMind – DBT Mental-Wellness App (Website) 11/2025 – Present

- Built an iOS app in SwiftUI (Core Data, WidgetKit, Firebase) that teaches Dialectical Behavior Therapy skills through a guided curriculum with streaks, Home Screen widgets, Live Activities, an SOS crisis toolkit, and a mood journal. Reached 400 App Store downloads.

Co-Developer, Sync – iOS Menstrual Cycle Companion (Github | Slideshow | Award) 10/2026

- Built an iOS menstrual cycle companion in SwiftUI and Firebase with history-adaptive predictions and a Gemini-powered AI companion (Firebase AI Logic) that answers questions from the user's own data under consent and scope guardrails; won the People's Choice Award (270 votes) at the UMass Boston AI Symposium.

Freelance Developer, Prettied with Paige (Website) 01/2026 – Present

- Built a full-stack business site (Next.js, React, TypeScript, Supabase) with validated inquiry forms, Resend email automation, an admin dashboard for managing reviews with row-level security, and an interactive map; optimized for SEO via sitemap and structured data.
